- BIM Project Support
- BIM Handover Planning
- Soft Landing

KEY ORGANISATIONS

- Skanska
- McLaren
- Balfour Beatty
- Wates
- MACE
- Lorne Stewart
- DSSR

ABOUT

With over 42 years in the industry Nick Simpson brings a wealth of technical and managerial experience that was gained working for a plethora of bluechip companies within the construction sector.

Over the past 10+ years alone, Nick has developed and honed in enviable digital capabilities when managing a team of MEP experts to create a step change in construction & construction management. This was achieved progressively as Nick led the introduction of new technology, and improved processes and collaborative behaviour, the effects of which were felt right across the organisation and senior management would regularly request demonstrations to customers to drive new business in both existing and emerging sectors.

Nick's primary expertise is centred around MEP design, detailing, design management, on-site construction management and O&M handover. Other specialist skills include: CAD, BIM, digital fabrication, office to field instrumentation, DFMA, lean and many emerging digital formats and data schemas. In addition, he has previously managed a CAD team within a Civil Engineering Consultancy and set up a remote intelligent 3D modelling capability in the subcontinent.

Currently, he is actively supporting the implementation of BIM 360 and Autodesk Construction Cloud across the Construction Sector.

The Construction Industry is going digital one site and one project at a time. There is no better feeling than seeing the expression on somebody's face when you've shown them how to do something in half the time that it normally takes them and with a better-quality output.
