- Navisworks
- Autodesk Forma

## KEY ORGANISATIONS

- Bennetts Associates
- Populous
- T P Bennett
- Foster + Partners
- Heathrow Airport Ltd
- HLM
- Squire and Partners
- Sheppard Robson

## ABOUT

Paul has been at Symetri for over 20 years and holds the position of Principal Consultant and Sector Lead for Architecture in Symetri UK.

Spending his formative years as an Architectural Technician, followed by a stint in the Exhibition and Graphics industry, Paul has worked for many years on design projects across the UK where he gained diverse experience in the use of technology in all areas of design.

During his time with Symetri Paul has carried out many different roles from training specialist to consultant. He maintains Autodesk Certified Instructor status to deliver Autodesk Certified Courses.

Delivering consultancy projects for our clients is his main focus. Projects covering technology implementation, ISO 19650 standards and workflows, BIM Management and Coordination, workflow automation through Dynamo and Symetri's Naviate technology, companywide design technology reviews, model compliance audits and project health checks are the areas Paul specialises in.

Although mostly focused on Architecture, the diverse range of Symetri's clients has given Paul experience in all areas of the construction industry, providing insight to the collaboration and integration workflows across many different disciplines. This allows him to tailor consultancy solutions to individual needs, drawing on that wealth of experience, to help our clients work smarter and do more with less.

As the construction industry evolves, designers are facing challenges in meeting the increased need for efficiency and flexibility. Ensuring that your design solutions are keeping pace with the wealth of new technology available is a challenging task in itself.
